

2023

A New School of Advanced Computing within Viterbi

From creating the Domain Name System in the 1980s to pioneering DNA computing and socially assistive robotics in the 1990s and 2000s, USC Viterbi has been trailblazing in engineering innovation. And 2023 is no exception. We are embarking on an ambitious campaign to reimagine how advanced computing is deeply embedded not only across the school, but also throughout the university and beyond.
